

LINCOMYCIN SOLUBLE - lincomycin hydrochloride powder, for solution

Alpharma Inc. Animal Health

Restricted Drug (California) – Use only as directed.

SWINE

Directions for Use

INDICATION

Lincomycin Soluble is indicated for the treatment of swine dysentery (bloody scours).

DOSAGE

Administer at a dose rate of 250 mg of lincomycin per gallon of drinking water. In clinical studies, this dose rate provided an average of 3.8 mg of lincomycin per pound of body weight per day.

TREATMENT PERIOD

The drug should be administered for a minimum of 5 consecutive days beyond the disappearance of symptoms (bloody stools) up to a maximum of 10 consecutive days. If water treatment is discontinued prior to this time, a lincomycin treatment program may be continued with lincomycin premix at 100 grams lincomycin per ton of complete feed as the sole ration according to label directions.

ADMINISTRATION

This packet will medicate 128 gallons of drinking water providing 250 mg/gallon. A dose of 3.8 mg lincomycin per pound of body weight may be maintained by medicating the drinking water at a concentration of 250 mg per gallon of drinking water when pigs are consuming 1.5 gallons per 100 lbs of body weight per day. Under these circumstances the concentration of lincomycin required in medicated water may be adjusted to compensate for variations in age and weight of animals, the nature and severity of disease symptoms, environmental temperature and humidity, each of which affects water consumption. For use in automatic water proportioners, prepare the stock solution by dissolving 1 packet in 1 gallon of water, then adjust the proportioner to deliver 1 ounce of stock solution per gallon of drinking water.

BROILER CHICKENS

Directions for Use

INDICATION

Lincomycin Soluble is indicated for the control of necrotic enteritis caused by *Clostridium perfringens* susceptible to lincomycin.

DOSAGE

Administer at a dose rate of 64 mg of lincomycin per gallon of drinking water.

TREATMENT PERIOD

Start medication as soon as the diagnosis of necrotic enteritis is determined. If improvement is not noted within 24 to 48 hours, consult a licensed veterinarian or veterinary diagnostic laboratory to determine diagnosis. The drug should be administered for 7 consecutive days.

ADMINISTRATION

This packet will medicate 500 gallons of drinking water providing 64 mg/gallon.

CAUTIONS

1. Discard medicated drinking water if not used within 2 days. Fresh stock solution should be prepared daily. 2. If clinical signs of bloody scours (watery, mucoid or bloody stools) have not improved during the first 6 days of medication, discontinue treatment and redetermine the diagnosis. 3. Occasionally, swine fed lincomycin may within the first 2 days after the onset of treatment develop diarrhea and/or swelling of the anus. On rare occasions, some pigs may show reddening of the skin and irritable behavior. These conditions have been self-correcting within 5 to 8 days without discontinuing the lincomycin treatment. 4. The safety of lincomycin has not been demonstrated for pregnant swine or swine intended for breeding. 5. Do not allow rabbits, hamsters, guinea pigs, horses or ruminants access to water containing lincomycin. Ingestion by these species may result in severe gastrointestinal effects. 6. Do not use the water treatment and the feed treatment simultaneously. 7. Not for use in layer and breeder chickens.

WARNINGS

1. No drug withdrawal period is required before slaughter of swine receiving Lincomycin Soluble at the approved level of 250 mg per gallon of drinking water, nor before slaughter of birds receiving Lincomycin Soluble at the approved level of 64 mg per gallon of drinking water.
2. Not for human use.

WARNING: Exercise care for handling. **DOSAGE:** Administer at a dose rate of 250 mg of Incuceptin per gallon of drinking water. In clinical studies, this dose rate provided an average of 3.8 mg of Incuceptin per lb of body weight per day. **TREATMENT PERIOD:** The drug should be administered for a minimum of 5 consecutive days beyond the disappearance of symptoms (typically allowing for a maximum of 10 days). **PRECAUTIONS:** Incuceptin should be used only in accordance with the directions on the program ring may be continued with Incuceptin pending at 100 mg of Incuceptin per unit of susceptible feed as the sole action according to label directions. **ADVERSE EFFECTS:** No adverse effects were observed in clinical studies. **CONTRAINDICATIONS:** The animal should be medicated 100 mg of Incuceptin per gallon of drinking water providing 250 mg/gallon. A dose of 3.2 mg Incuceptin per lb of body weight may be maintained by medicating the drinking water with 100 mg of Incuceptin per gallon of drinking water when the animal is receiving 100 mg of Incuceptin per lb of body weight per day. **STORAGE:** Store in a cool, dry place. Concentrations of Incuceptin required in medicated water may be adjusted to compensate for water evaporation, water intake, and water quality. **OTHER PRECAUTIONS:** Incuceptin should be stored in a cool, dry place, away from direct sunlight, moisture, and humidity, each of which affects water consumption. For use in automatic water pre-mixers, prepare the stock solution by dissolving 1 packet in 1 gallon of water.

[illegible]

BROILER CHICKENS: 6 weeks for use
USAGE: Administer at 1 cc per 100 g of live weight per gallon of drinking water.
TREATMENT PERIOD: Start medication as soon as the diagnosis of nematode infestation is determined. Improvement is not noted within 24 to 48 hours, consult a licensed veterinarian or laboratory for confirmation of the diagnosis.
ADMINISTRATION: This product will treat 5000 gallons of drinking water providing 16 mg/kg/day.

CAUTIONS:

- 1) Dissolved medicated drinking water if used must be used 2 days. Fresh stock solutions should be prepared daily.
- 2) Falsely types of bloody stools, diarrhea, mucus or bloody stools have not improved during the first 6 days of treatment. Consult your veterinarian for alternative diagnosis.
- 3) Occasionally, severe lethargy may occur within the first 2 days after the start of treatment. This is usually self-limiting and may be due to the irritant effect of the drug on the digestive tract. If the condition persists beyond 3 to 5 days, discontinue the ivermectin treatment.
- 4) The use of ivermectin has not been demonstrated for pregnant female or male animals for breeding.
- 5) Do not allow rabbits, hares, guinea pigs, ferrets or ruminants access to water containing ivermectin. Ivermectin may be harmful to aquatic pondlife and other aquatic life.
- 6) Do not use the water treatment and the feed treatment simultaneously.
